

Name: Prince Raj

Registration Number: 25BCE11293

Branch: CSE Core

Year: First Year B.Tech

Course Code: CSE0001

Course Title: Digital Literacy

Date: 31/04/2026

This project was complete as part of the Digital Literacy course, where I was assigned the role of a Student Digital Ambassador. The motive was to build a Digital Literacy Portfolio to help students understand and navigate the digital world efficiently. The project involved five tasks covering key aspects such as creating awareness about digital literacy, building a professional online presence, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime awareness. With the help of this project, I gained practical experience with various online tools and platforms. It also helped me to gain importance of digital skills such as communication, online safety, and professional networking, which are necessary for academic and career growth in today's digital era.

Task 1

In Task 1, I made a digital literacy awareness infographic using Canva. The infographic focused on explaining what digital literacy is, highlighting important digital tools for students, and emphasizing notion towards safe internet practices. I chose Canva because of its user-friendly interface and availability of templates, which made it easier to format a visually appealing layout.

The infographic included sections on online safety tips, examples of useful tools like Google Workspace and GitHub, and the importance of maintaining a professional online presence. While designing, I found it interesting to experiment with icons, and layouts to make the content engaging and easy to understand.

One challenge I faced was selecting the right amount of information without overcrowding the design. It required careful planning to ensure clarity and readability. Overall, this task improved my design skills and helped me understand how visual communication can effectively spread awareness about digital literacy.

Task 2

In Task 2, I created and updated my profiles on platforms such as GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose. GitHub is used for showcasing coding projects and maintaining repositories, LinkedIn is a professional networking platform, and Kaggle is useful for data science and machine learning practice.

On GitHub, I created a profile README including my name, branch, and learning goals. On LinkedIn, I updated my education details and built a basic professional profile. These platforms are essential for building an online presence and showcasing skills to recruiters and peers.

In the future, I plan to regularly update my GitHub with projects, connect with professionals on LinkedIn, and participate in competitions on Kaggle. Over the next four years, My goal is to build a strong digital portfolio that reflects my academic progress and skills.

This task helped me understand the importance of maintaining a professional identity online and how it can boost my career opportunities.

Task 3

In Task 3, I explored coding and collaboration platforms. For coding practice, I used HackerRank and completed a beginner-level problem. This helped me understand simple problem-solving techniques and how platforms related to codes evaluate solutions.

For the collaboration part, I created a Google Form containing title named “Digital Literacy Awareness Quiz” with five questions, including multiple-choice and shortanswer types. I also viewed the responses using Google Sheets, which demonstrated how data can be collected and analyzed easily.

This task was very useful in understanding how online tools can support academic learning. Coding platforms help improve logical thinking and programming skills, while tools like Google Forms are helpful for surveys, quizzes, and data collection.

Overall, this task enhanced my practical knowledge skills of digital tools and showed how they can be applied in real-life academic scenarios. It also encouraged me to keep practising coding regularly.

Task 4

In this task, I worked on professional communication by writing formal emails and creating a social media etiquette checklist. A common scenario where poor digital communication causes problems is when students send informal or unclear emails to professors, which may lead to misunderstandings or delayed responses.

For example, an email without a proper subject line or respectful tone may be ignored. This can be avoided by following proper email structure, including a clear subject, polite greeting, concise message, and professional sign-off.

From this task, I learned the importance of clarity, tone, and professionalism in digital communication. These skills are important not only in academics but also in internships and professional environments.

Task 5

While researching about cybercrime, I was surprised to learn how common phishing and online payment frauds are, especially among students. Many attacks happen due to lack of awareness, such as clicking on suspicious links or sharing sensitive information.

One important habit I will change and keep in mind that, is being more cautious while clicking on links and verifying the authenticity of websites before entering personal details. I will also ensure that I use strong passwords with characters and enable two-factor authentication wherever possible.

This task made me more aware of online risks and the importance of following safe digital practices. It also highlighted the need to educate others about cyber safety.

Conclusion

This project provided valuable information about digital literacy and its importance in today's world. I learned creating digital content, build a professional online presence, use collaboration tools, communicate effectively, and stay safe online. Each task contributed to developing practical skills that will be useful during my academic and professional journey. The experience also increased my confidence in using digital platforms responsibly. Overall, this project really helped me to understand how to navigate the digital world efficiently and encouraged me to continue improving my digital skills and related practices.
